The CPI Satcom & Antenna Technologies Inc. (CPI SAT) Anti-Iced Antennas have power densities of approximately 35 watts per sq. ft. of heated surface utilizing the “blanket” resistive wire technique.

The Moisture/Temperature version is an automatic system that will activate heaters when the temperature falls below about 38 degrees Fahrenheit (3 C.) and sufficient moisture is present to permit the formation of solid precipitants. These features are cost savings driven so that power is applied only when atmospheric conditions warrant.

Systems include a selector switch permitting the operator to energize the heaters at any time, or to disable (turn off) the automatic feature at discretion.

Systems with Temperature only controls activate heaters at about 38 degrees Fahrenheit and remain on until temperatures rise above 45 degrees Fahrenheit.
